

Opal RediDock™

Remote handset & dock for Opal DECT Cordless

Adding additional handsets in your guest rooms or suites is as easy as RediDock. Used with our Opal DECT cordless phones, each cordless handset mates with the cordless base station in the room. All you need is an electrical outlet to plug in an AC adapter for the RediDock charge station.

So now, even if the nearest phone jack is all the way across the room, or hidden by furniture, you can add a cordless handset in the spot most convenient for the guest. RediDock lets you deploy one full cordless phone (handset and base) and up to three additional remote handsets – perfect for tucking away in tight spaces, bathrooms, or wherever!

Includes cordless handset and charging station

(Can be used only with Teledex DECT cordless phones; not compatible with previous versions of our cordless phones)

Add Cordless Handsets Wherever You Need Them!
