

RediDock™

Put a Cordless Handset Wherever You Need It!

Remote charging station for iPhone DECT cordless.

It turns out that hotels aren't always wired the way interior designers wish they were. After the room redesign is done, often your phone jacks are all hidden by furniture, making it next to impossible to locate guest room phones where you need them.

Enter RediDock. A compact charging cradle for our Teledex iPhone cordless handsets, with RediDock you can now deploy one full cordless phone (handset and base unit) and up to three additional handsets within the same room or suite. So, wherever there is a place to plug in an AC adapter, you can have a cordless handset. No more wires, no more confusion.

Includes cordless handset and charging station
